Basic concepts

Welcome to the mockups of the SEETechnology website. This page summarizes the basic concepts which influenced the user interface design.

The UI MUST be built with Twitter's Bootstrap or a favor of it which relies on the latest version of Bootstrap. This allows us to use the built-in Bootstrap components, e.g. the modal dialog.

The UI is optimized for 1024px fixed width. Although we could optimize for wider screens, most pages does not have that much content that would look great on them.

Dialogs communicate asynchronously with the server.

In case of asynchronous communication, a progress indicator must be displayed.

The user may close the dialog during the asynchronous operation only if the operation can complete in the background. In this case the user is not notified about the success or failure of the operation. (Although we could use a more user-friendly notification UI pattern, this simplifies the logic.)

Several notes are added to the right side of the mockups which describes the behaviour or call attention to implementation details. Please click **View -> Show Markup** to view them.

The mockups show the proposed URLs for the pages in the address bar of the browser frame.

START

The Project

SEETechnology is a part of South East Europe (SEE) Transnational Cooperation Programme. The project is about co-operation of SEE (South East Europe) science parks for the promotion of transnational market uptake of R&D results and technologies by SMEs. It's about creating the environment for innovative entrepreneurship.

The Project
Challenges
Objectives
Partners
Contact
Follow us on Twitter
Join us on Facebook

Challenges

The SEETechnology project responds to 3 main identified challenges:

1. SMEs in the SEE region are especially weak in terms of innovation and access to innovation

2. there is a mismatch between the supply and demand of research products at local/ regional/ transnational level

3. university connected science park lack resources and knowledge and do not work closely with SMEs

Therefore the main objective is to **improve and develop support services** to innovative SMEs provided by university based SME-support centres and science parks in order to facilitate the take-up of research ideas and products through better access to knowledge, resources and markets locally and at transnational level.

The project ultimately targets innovative SMEs, which are able to embrace research products or may be the carriers of such ideas but currently face difficulties in access to management-type knowledge, facilities and support services. The project aims at the **establishment of new and durable joint transnational services, tools and frameworks** and will put into practice developed and improved methods and explored good practices.

Objectives

a) Improve the market potential and entry of research-intensive and high-added value products of innovative SMEs by the development of the quality and portfolio of SME-support services at university-based SME-support centres.

b) Improve access of innovative SMEs to human and physical resources through university-based SME-support centres by pooling and registering such resources at a transnational level and mobilising new and unused resources,

c) Improve access of SMEs to research ideas and products and to services offered by universities by developing effective means of communication and publicity.

The project aims at the establishment of new and durable joint transnational services, tools and frameworks and will put into practice developed and improved methods and explored good practices.

Permanent co-operation and partnership schemes operated by SME support centres will be set up and web outreach and stakeholder platforms in the form of Innovation Labs will enhance the reach of SMEs by the centres.

The 24 month-long project aims at creating a sustainable framework after the project ends. Further, project partners prepare policy recommendations regarding R&D transfer and business support activities based on the project experience and the involvement of innovation labs in order to influence the regulatory framework in the favour of the market uptake of research results. The project's most important outputs are tested joint new services, interconnections of these services, targeted policy recommendations, an operational multi-purpose ICT tool with rich and structured database.

The Project

SEETechnology is a part of South East Europe (SEE) Transnational Cooperation Programme. The project is about co-operation of SEE (South East Europe) science parks for the promotion of transnational market uptake of R&D results and technologies by SMEs. It's about creating the environment for innovative entrepreneurship.

Challenges

The SEETechnology project responds to 3 main identified challenges:

1. SMEs in the SEE region are especially weak in terms of innovation and access to innovation

2. there is a mismatch between the supply and demand of research products at local/ regional/ transnational level

3. university connected science park lack resources and knowledge and do not work closely with SMEs

Therefore the main objective is to **improve and develop support services** to innovative SMEs provided by university based SME-support centres and science parks in order to facilitate the take-up of research ideas and products through better access to knowledge, resources and markets locally and at transnational level.

The project ultimately targets innovative SMEs, which are able to embrace research products or may be the carriers of such ideas but currently face difficulties in access to management-type knowledge, facilities and support services. The project aims at the **establishment of new and durable joint transnational services, tools and frameworks** and will put into practice developed and improved methods and explored good practices.
